Field of the Invention This invention relates to a method and an apparatus for printing an image on a recording medium in an image formation unit of an image forming apparatus such as a printer, a copying machine or a facsimile machine. 2. Related Background Art Hitherto, as an image forming apparatus, there has

been known an ink jet type image forming apparatus which applies an ink jet to a recording medium to form an image. The ink jet type image forming apparatus forms an image by discharging ink from nozzles. In this apparatus, ink is usually discharged from the nozzles by mechanical deflection of piezoelectric elements or by applying a pulse-width modulation (PWM) waveform signal to an

electro-mechanical transducer such as a heater, and the like. As one technique for improving the printing speed of the ink jet type image forming apparatus, there has been known a method in which one-pass printing (i.e., printing in a single pass of a recording sheet) is performed in a region where a print area is wider than that of a conventional print head, and a band or a plurality of recording

heads disposed in parallel are driven by a paper feeding unit and the conveyed recording sheet is printed by one-pass scanning. According to this method, it is possible to reduce printing intervals of a recording sheet to realize the one-pass printing, and thus to realize high-speed printing. For example, according to Japanese Laid-Open Patent Application No. 2000-126723, the

control of the printing speed in the one-pass printing is realized by controlling the weight of a paper feeding unit of the image forming apparatus.
