ExigoBatch is a small and very easy to use application that can compile *.bat files or batch script input to managed.NET application (*.exe) Batch script builder: ExigoBatch is a small and very easy to use application that can compile *.bat files or batch script input to managed.NET application (*.exe). ExigoBatch is made with Visual Basic 2005 but it can be re-written in any other language (, C#,.NET, VBScript, etc.). With ExigoBatch you can choose between several batching techniques: Compilation – Compiles a.NET code file written in a managed language (VB/VB.NET, C#,.NET assembly). Generation – Compiles a.NET code file written in a managed language (VB/VB.NET, C#,.NET assembly). Batch script compilation – Provides a way to create/execute a batch script. Sharing of assemblies There is a way to share assemblies between a.NET app and a.BAT file. However, it's hard to manage the references between a Windows exe app and a BAT file on Windows and this doesn't scale well. It's even better to compile.BAT code to an assembly (using a batch file or using a batch file builder as ExigoBatch) The way to do it You need to compile the batch script to an assembly first, and then launch that assembly using the.BAT file. How to compile a.NET assembly to.BAT file: The compiled BAT file can be created as follows: Create the code behind class that extends the.NET Framework class System.Diagnostics.Process (Documentation). public class ExecuteBatchFile : System.Diagnostics.Process { } Set the working directory. public ExecuteBatchFile() { string[] args = null; string dir = System.Environment.GetFolderPath(System.Environment.SpecialFolder.DesktopDirectory); this.StartInfo.WorkingDirectory = dir;

What's New In ExigoBatch?

It runs on.NET 4 It works for.NET 3.5 as well It features a GUI for easy launching with the use of BatchToExe.exe and for editing the VersionInfo from the Batch Version to the.NET Version It allows automatic generation of.NET Applications (*.exe) from batch files/batch scripts Features: No need for BatchToExe.exe : this app will run the batch file that is being used as input. Version information can be set to the.exe. BatchToExe can be configured. It has a graphical interface, so it is very easy to use. If you like it, feel free to send me an e-mail with a test version for you and I will try to add it to the documentation How to Launch ExigoBatch: Run the batch file. Now, double-click on the.exe file that was made. All the options are in the menu. How to Generate a.NET Application From a Bat File: First, open the batch file, which will be used as input for the *application Then, edit the VersionInfo if you like. I suggest to use the "Auto-Edit" option. Add the path to the.NET application. Now, double-click on the ExigoBatch.exe to launch the batch file. After the batch file has run, simply copy and paste the.exe to the directory where you want to create it. Version Info: You can edit the VersionInfo from the first entry of the VersionInfo to the.NET Version, but you should double-check that the *AppName can be found in the first item from VersionInfo. This way the program will generate an EXE with your *AppName in the Title. ## Testimonials: "I found this to be a very useful tool to build either a Windows Service or an exe that run autonomously via the command line. Very useful." "I am very happy, I used it for the first time. You can edit the VersionInfo from the batch file, and the application was compiled successfully. Finally, I have solved the project." "Finally I found the solution to the problem... It worked as expected. I had issues with accessing the output folder on the C drive, but managed to
