Simply enter the file path and select one of the available hash types,... 4.00 HashCode - File Integrity Checker is a desktop software utility designed to check the integrity of your files. The tool allows you to verify the file's hash codes and calculate the hash values of your files. Neat and easy-to-use interface The software is wrapped in a simple, clean and straightforward interface with all of its key features and buttons displayed in the main window. There should be no configuration issues to any kind of users, even beginners. The main panel consists of a text box for the file path you are about to enter. Below that line are five algorithms. A check box next to each option makes it easy to indicate which algorithm will be used to extract the hash code. Main functionality Basically, all you have to do is import the file that you wish to check the hash code for using the built-in browse button, select one of the available hash types, namely MD5 (16 bytes), SHA-1 (24 bytes), SHA-256 (32 bytes), SHA-384 (48 bytes), or SHA-512 (64 bytes), and then proceed with the task. It's possible to change the hash type even after the file was added. Once listed, details can be analyzed, such as the full path, name and format. The provided hash codes can be copied to the clipboard and delimited through a separator with only one click of the mouse. Unfortunately, File Hash Code Calculator can't calculate the hash code for multiple files at the same time. Furthermore, the tool automatically extracts the hash code for a file and doesn't give you the possibility to disable this option, which can be an inconvenience when working with large files. On top of that, it always stays on top of other windows (cannot be disabled). Last few words All in all, File Hash Code Calculator proves to be a reliable and useful tool that lets you verify the integrity and calculate the hash codes of your files. Unlike other software-based content-verification tools, KeyMacro™ provides an easy-to-use solution that is completely free and simple. It performs a cross-platform check on a file or folder without needing any special knowledge. It will calculate a hash code for files and folders. A hash code is a checksum that is calculated from a file's contents (any file, not just binary files). The hash code is a unique string of characters. KeyMacro™ is the only free and fully-featured hashing tool on the market, with no limitations, trial periods or limitation on usage. It is supported on Windows, Linux, and Mac OS X. The password is stored within the application. So, no password is required from the user. It is capable of both on-demand and continuous checks, so the hashing can be run on a selected set of files or folders. KEYMACRO features: - Support on Windows, Linux and Mac OS X - Multi-thread support - Run checks in the background - Supports checks of multiple files/folders - Runs checks of entire folders - Support on FAT and NTFS filesystems - Support for.NET/Mono on Linux, Mac OS X and Windows - Support for decompression - Powerful command line arguments to support complete custom solutions - Automatically calculate hashes of any binary file, including encrypted files - Support of portable encryption schemes for additional security - Calculates raw MD5/SHA-1/SHA-2/SHA-512/SHA-512-512 hashes - Powerful hashing modes including MD5, SHA-1, SHA-2, SHA-512 and SHA-512-512 - Supports Unicode files - Supports ZIP files - Supports SHA256 and SHA384 output - Calculates file hashing - Supports 64-bit and 32-bit digest algorithms - Supports SHA-256, SHA-512, SHA-512-512, SHA-384 and SHA-512-512 - Easy to use GUI with powerful options - Embedded free license key - Easy installation, only one mouse-click - No installation required - Support for.NET 4.5/Mono 3.0, Mono 2.8.7, Mono 3.2 - Runs on any OS, Windows, Linux, Mac OS X - Easy to integrate into software projects - Multi-platform compatible - Runs all Linux distributions - Supports all Linux distributions 1d6a3396d6
