A useful bonus of this tool is that the exact copy of the pixels can be traced with a brush or pen tool, giving you the option of painting directly on top of an area you copied earlier. The Healing Brush can be used to correct minor image defects such as dust specks and other blemishes that would otherwise interrupt the flow of a painting. The healing tool can remove objects from an image, making way for other elements. The Polygonal Lasso allows you to select multiple objects with a brush, precisely. Once selected, you can edit individual components of the selected objects, such as their color, opacity, etc. The Pen tool allows you to draw lines, shapes, and objects on a document. You can also adjust the width and color of the line you're drawing. The Rectangular Selection tool enables you to make rectangular selections by dragging your cursor over a section of the document. The Smudge tool allows you to smooth out the edges of an area of an image you're working on. The tool works by slightly lifting and adding pixels to your image. An added benefit of the Smudge tool is that, like the Healing Brush, you can click the Smudge tool to the middle of the image and click again to anywhere you wish to paint. The Spot Healing Brush tool allows you to smooth out minor blemishes in the image. You can also use the Spot Healing Brush tool to click and drag multiple sections of an image to make a patch. You can use the Pen tool to draw any object on the canvas or select an object, and then apply a special effect to the selected area. The Pen tool also has some additional tools, like the Eraser tool, which enables you to erase parts of your image, and the Sponge tool, which is similar to Photoshop's Filter tool, and is used to apply special effects. _Using a Brush_ The Brush tool is one of the most useful tools in Photoshop, especially for painting over parts of an image. The brush controls are important when you want to paint quickly and precisely, but with an object near the edge of the document or in a location that may not be a part of the image, the Brush tool may not work as expected. Fortunately, these problems are easy to fix. For the best results, paint as the image is displayed. You can paint anywhere on the canvas or place your brush anywhere you want. When painting,

Factors Affecting Osteosarcoma Radiotherapy Response: A Retrospective Review of 94 Cases. The objective of this study was to explore retrospectively the effect of primary tumor site, imaging characteristics, imaging response, and chemotherapy administration on osteosarcoma response to preoperative radiation therapy. Ninety-four patients (63 male, 31 female) with nonmetastatic osteosarcoma, treated preoperatively with radiation therapy between 1986 and 2004, were retrospectively reviewed. Median age was 15 years (range, 4-61 years). The sarcomas were located in the proximal femur (n = 33), distal femur (n = 20), proximal humerus (n = 20), proximal tibia (n = 12), distal humerus (n = 9), and proximal radius (n = 4). The imaging features and responses were assessed qualitatively. Univariate and multivariate analyses were used to evaluate the effects of primary tumor site, type of radiotherapy, preoperative radiation treatment time, and preoperative chemotherapy on tumor necrosis (necrosis grade and degree) and local recurrence. The median follow-up period was 20 months (range, 1-256 months). The dose-volume histogram-based qualitative response classification was a good predictor of tumor necrosis on multivariate analysis (P = 0.02), independent of tumor site. A preoperative radiation dose greater than or equal to 45 Gy was a good predictor of higher tumor necrosis (P Studies on the synthesis of L-dopa by the action of tyrosinase on tyrosine. Tyrosine incubated with tyrosinase from Arthropterix californica (A.c.) produces dopamine and is converted to phenylpyruvate. Dopa-like substances, not containing tyrosine, are formed in tyrosine solutions if tyrosinase is omitted. These do not contain indoles but have a strong alpha-naphthalenic odor and appear identical with the substances formed in L-dopa biosynthesis by
