(ADC) is an award winning professional damage control solution which protects your data by scanning the areas of your hard drive affected by damage, and removing corrupt and infected files. For files you can see there is a process of removing the damaged section and repairing the file in place. This process allows you to recover your data almost as quickly as it went missing in the first place. For files you can't

see there is a process of re-writing the file with a copy of the data that is untouched. This process allows you to recover your data without losing any of the data. This video shows how to recover corrupted, damaged and virus infected files using the one of the most famous Windows software which is capable to get back all your important data after data damage. On top of that the important data after virus attack remains intact and not deleted, overwritten or replaced by any other files and data. This software lets you recover data faster than the normal methods. 3D-Studio (formerly known as simiStudio) is a program that

allows you to model buildings. It is a 3D modeling program which has been designed for users who are not familiar with CAD-programs.
