Administration of L-ethionine to rats fed a high cholesterol diet causes depletion of macrophages and a decrease in the ability of L-ethionine to reduce the arachidonate-freeze-dried lipoprotein-induced release of phospholipase A2 from macrophages. Administration of L-methionine also decreases the number of macrophages in the same tissue. The decrease in macrophages in the livers of the rats fed a high cholesterol diet after L-ethionine administration may be due to a selective reduction in the number of Kupffer cells. Injection of mice with endotoxin caused a rapid decrease in the number of macrophages in their spleens. The decrease in macrophage numbers was accompanied by an increase in the basal release of phospholipase A2 from macrophages of the spleen.Q: What is the meaning of 'Repair database /f'?
