Synchro.Arts.Revoice.Pro.v3.1.1.3.x64.WIN-AudioUTOPiA.[oddsbox] is a software product developed by Synchro. A: Looks like you were trying to use OpenSSL::SSL::SSLSocket.new('www.google.com:443') # Try OpenSSL::SSL::SSLSocket.new('www.google.com:443') # or OpenSSL::SSL::SSLSocket.new('www.google.com',443) # or OpenSSL::SSL::SSLSocket.new('') # or OpenSSL::SSL::SSLSocket.new('','443') All these are wrong. You should read The OpenSSL documentation for SSL. Then require 'rubygems' require 'open-uri' OpenSSL::SSL::VERIFY_NONE = OpenSSL::SSL::VERIFY_NONE OpenSSL::SSL::VERIFY_PEER = OpenSSL::SSL::VERIFY_PEER \$socket = OpenSSL::SSL::SSLSocket.new('www.google.com', 443) \$socket.connect With the VERIFY_PEER, VERIFY_NONE, and VERIFY_PEER used as above, \$socket.connect won't return true until the SSL handshake is completed, it will return false if the SSL handshake was not completed. With the VERIFY_NONE used without VERIFY_PEER, 82138339de
