What's New in the LIB To A Converter?

========================= Lib2A - LIB to A Converter is a program that help to convert MS Visual C linker lib file into MinGW linker lib file automatically. It is useful to make a C/C++ program a reusable component. This is a tool I wrote for myself to give me another editor I can use. It does not exist in the main repositories, but I believe a lot of people might find this useful. There are three editions: - free edition that can be downloaded right here: - pre-paid edition that can be purchased right here: - paid edition that will be available at the bottom of this description I've also released scripts that allow you to generate Random passwords for all the ZIP and RAR archives in a folder, in all the file extensions and in all the password options. It will be useful for writing and checking passwords for release candidates of GBA games, register keys for GBA games, etc. It can also be used for writing passwords for games you don't own. This script is easily configurable via a text file. To automatically update my scripts whenever I release new releases, right click on the script and select Update Auto Download. A.bat and.lua script will be created. You can also easily manually download the script. Never miss a new release: Have a problem and need help? Want to know if a script is working? Do you want to have a more polished version released? Or just want to chat? Thursday, December 15, 2011 ...And I'm tired of being dormant. I've been thinking about my last post (Then, my ideas came back. You may know me as Penguin the GPL Warchannelist. I was thinking about writing a series of blog posts about, how to port a licensed game to use an open source library
