I have created a custom user control with a couple of string properties: Name and Description. When the user control is initially instantiated, I want to bind it's properties to two separate objects (MyObject and MyAnotherObject) that I have created. MyControl is then to be displayed at a number of ca3bfb1094

I'm a software developer since 7 years and I have done a lot of modification and stuff. I'm very interested in games and what makes them special. One of the main things that makes games special is the story that goes inside them. I can read and speak Korean, Japanese and Chinese. I'm also into film and music. When I was a kid I have always loved to draw. This love lasted until when I was 15 years old. I began my interest in games at that time. I started to play when I was 16 years old. Since then I played games every day. There are many games out there. My favourites are inbetween films and action games. Sometimes I like to play the more casual games. For example, people play Candy Crush or similar. I use to play Minecraft a lot. I started to play Minecraft on PC when I was about 14 years old. But I don't know anything about Minecraft anymore. I play a lot of Games like Call of Duty, CS and other stuff. But for some reason i'm less interested in those game. I know the basic of the game but I'm not so interested in them. I always end up by playing NieR Automata. It's a Playstation 2 game and I think it's one of the best games of the world. Ok I'm getting confused. I started to play NieR Automata and I have played a lot. It is a great game but I'm tired to play it. So now I'm trying to finish a great game. I'll play it forever and until I finish it.
