Otto Salem he has given the following question: Q: What is the graph of the function $f(x)=\frac{\sin(x)}{x}$ approaches as x approaches infinity? I solved it using the idea that $f(x)$ approaches the maximum and minimum value of $\frac{\sin(x)}{x}$. So from the lagrange theorem the maxima and minima of the function $\frac{\sin(x)}{x}$ would be at $x=\frac{\pi}{2}$ and $x=0$. I want to know the right answer to this question, but could not find it in the book. Any help is highly appreciated. A: The standard definition of "asymptote" is an y -axis line not passing through the origin, where $f(x) \rightarrow 0$ for $x \rightarrow \infty$. In this case, the answer is clearly the y -axis, at $x = \infty$. You need only consider the behaviour of the function at $x=0$ since $\frac{\sin(x)}{x} \rightarrow 0$ for $x \rightarrow 0$ (not $\pm \infty$). [The philosophy of medicine in Brazil: an attempt to explain the attitude of doctors during the forties]. In Brazil the mainstream of medical thought is basically utilitarian, pragmatic, and empiric.
