HyperMotion Technology enables game moments that have been harder to capture with current video capture. For example, when a player is running away from an opponent, does he change his entire football run to run straight? FIFA 22 answers with perfect details. This technology is the next step in the evolution of video game play. It's about telling a game story through the knowledge we gain from real players in real matches. It's about a story of 22 real players in motion. This is a new and powerful way to experience and enjoy football. FIFA 20 added a new "Foot Acceleration" signature feature, allowing players to control how fast their running speed changes. This created a new "Familiar Timing" for these running animations, allowing players more flexibility to switch timing. We wanted to recreate this new profile for all running sequences in FIFA 22. Now players can modify the acceleration curve of every running animation, from all possible breaking runs or tackles to goal kicks. Foot Acceleration signatures are currently unlocked at the Pro level in FIFA 22. We also added a new Matchday. Create your squad and enter matchday mode to set up a goalkeeper, including how to break out of defense. FIFA 22 continues to build on the foundations of FIFA 19 with new features and game improvement. This is the most realistic and authentic simulation of football game ever made.
