compressor, offering various tools designed specifically for the compression of a variety of audio, video and capture media, such as: Audio and video media processing It can handle different bit rates for video and audio media: 384kbps (QCIF), 48kbps (SD), 192kbps (HD), and 23.98kbps (Blu-Ray). The audio bit rate depends on the sample rate. Support is also available for lower bit rates, such as 16 and 8kbps. Filter objects can be used for additional processing

The compressor comes with an extended filter set, and includes tools such as the compressor itself, a stereo imager, a limiter, a Spectrum Analyzer, a Spectrogram and a Peak Meter. Input and output channels can be individually compressed Audio and video channels are treated differently in the compressor: the audio channels are compressed with an average quantization noise curve (AQN), while the video channels are compressed with a

high-resolution quantization noise curve (HQN). The HQN curve can be manually adjusted, while the AQN curve is automatically set according to the bit rate. Time domain processing enables real time compression on Windows and OSX, and on-the-fly decompression on Linux The compressor is based on a totally sample-accurate fully discrete time aa67ecbc25
