

## Roscience Phase 2 8.005 Country Armadura Emu

4 comments : I am now not positive the place you're getting your info, but great topic.I must spend a while studying more or figuring out more. Thank you for magnificent info I was in search of this information for my mission.us treatment of cancer. The results from the present study indicate that stem cell-derived CM activated signaling pathways in the AKT/mTOR and Wnt/ $\beta$ -catenin signaling pathways that are known to play important roles in cellular growth and proliferation. 5. Conclusions (#sc5-jjms-18-02533) ===== In conclusion, we have demonstrated for the first time that human iPSC-derived MCs secrete factors, including TGF- $\beta$ , VEGF, bFGF, and HGF, that activate the AKT/mTOR and Wnt/ $\beta$ -catenin signaling pathways, and induce fibroblast proliferation and migration, suggesting that these cells secrete molecules that contribute to cancer development in the lung. Therefore, we propose that iPSC-derived MCs or their CM could be used as a new source of cancer cell-like CM to induce lung carcinogenesis. This study was supported by grants from the National Research Foundation of Korea (NRF-2014R1A2A1A05001618 and NRF-2016R1A2B4014906).
