Contents Popular topics on the internet can be found using Google. Here are a few examples: General Commands in Photoshop Basic commands General commands include all the basic tasks for a beginner user who would like to learn or teach Photoshop as a tool for image editing. This list, however, is not comprehensive and not in order of importance. The Photoshop commands are used to manipulate colors, shapes, and sizes. If you are looking for help with coloring, shape-shifting, resizing, or even re-painting you came to the right place! This tutorial shows you the basic commands in Photoshop for editing color, shapes, and sizes. We will start with the various brushes on the brush and tools options and then talk about the layer menu, which is at the top of the window and which is found in every file and image that you have open. Browse Forward/Back/Ctrl + F/Ctrl + B/Alt+Tab The Browse Forward/Back/Ctrl + F/Ctrl + B/Alt+Tab command is a basic tool that you can use to navigate through your files. The first time you use it it will get you to the first file you have opened. If you then hit the F key on the keyboard or click on the first file tab of the file browser, the file will jump to the first photo or the first tab. Alternatively, you can press the Ctrl+F key, which will jump to the first photo in the file or first open tab in the file. You can use the Ctrl+B and Alt+Tab to go to the next photo or the next open tab. Regardless of what file you are currently viewing, just hitting the F/B/Ctrl+F/Ctrl+B/Alt+Tab key will get you to the first photo in the file (or first photo of the first open tab) even if you have previously been in a different file. Simply hit Ctrl+F to access the first photo in the file or Alt+Tab to jump to the first photo of the first open tab. The Ctrl+B (back) will move you to the previous photo in the file or previous photo of the first open tab. Layer Menu The Layer menu (see below) is an easy way for beginners to change the basic layers. There are various effects you can apply to a layer, such as changing the opacity to 100% by hovering over it

Last night, a one-time Republican presidential candidate and, for a time, Vice Presidential candidate, Sarah Palin, launched a high-speed diatribe against Barack Obama's policies. When briefly elevated to the position of Governor of Alaska, Palin began her tenure by ordering the closure of the state's oil pipeline, which would have caused a number of major layoffs, the imprisonment of many small business owners, and severe damage to the lower-income communities that depend on such jobs. Palin has since walked back her statement of support for the "deregulation of pipelines." Now it is her feigned outrage that Barack Obama is seeking the continuation of corporate tax breaks and subsidies. Shouldn't Palin be upset that her beloved small businesses are being hurt by these policies? Shouldn't she be upset that federal subsidies are being offered to corporations who use those subsidies to produce fuel for aircraft and cars that will destroy the planet? Advertisement: "I'm just disappointed," Palin sighed. "I'm just so disappointed that our first-term president is putting the rest of us through a wrenching four years like this." To paraphrase John McCain, as Barack Obama's presidency gets underway, the brightest stars in the Republican firmament are beginning to dim.

The changing colours, the bare tree branches that have begun to show off their reds and golds, the empty fields. There are a host of small things that I like about the season: the sudden chill, the burning orange glow of the sun, frost-covered leaves, the taste of things that were

1. Field of the Invention The present invention relates to a thin film magnetic head which is used as a reproducing head in a magnetic recording and reproducing apparatus such as a hard disk drive unit. More particularly, the present invention relates to a thin film magnetic head having a structure in which a magnetoresistive element (hereinafter referred to as MR element) is connected to a top magnetic pole.

2. Description of the Related Art Recent advances in information and communication technologies have been remarkable, and magnetic recording and reproducing apparatuses, particularly magnetic disk recording and reproducing apparatuses are essential components of information processing systems. A magnetic head is one of the indispensable components in a magnetic recording and reproducing apparatus. The recent rapid increase in the volume of information to be handled necessitates developing a magnetic disk recording and reproducing apparatus with a higher recording density. A giant magnetoresistive head (hereinafter referred to as GMR head) has a relatively higher sensitivity, and is thus suitable for a high recording density. A tunneling magnetoresistive head (hereinafter referred to as TMR head) using the tunnel effect has a relatively higher MR ratio and is thus suitable for a high recording density. However, the TMR head has a problem in that the MR ratio decreases with age. MR (Magnetoresistive) elements have resistances that change in accordance with the relative relationship of the direction of magnetization of a free magnetic layer (free layer) and the direction of magnetization of a pinned magnetic layer (pinned layer). Further, in order to obtain a desired electric resistance, an electrically conducting nonmagnetic layer (conductive layer) is provided between the free magnetic layer and the pinned magnetic layer. In a GMR element, the change of the electric resistance of the GMR element in accordance with the change of the relative direction of magnetization of the free magnetic layer and the pinned layer is generally larger than that of a TMR head. Further, a spin-valve head (hereinafter referred to as SV head) uses a magnetization fixed layer of a fixed layer of a TMR head and has a structure in which a nonmagnetic conductive layer is provided between a free magnetic layer of the free magnetic layer and the magnetization fixed layer. A spin-valve head is further provided with a hard layer made of, for example, a material such as Ta, for the purpose of improving the read sensitivity. However
