apparatus for recovering heat from
ambient air, and more particularly to such
an apparatus adapted to be used in a
motor vehicle. Various apparatuses are
known in the prior art to extract energy
from ambient air and to heat air circulating
through the motor vehicle. The prior art
apparatuses comprise various units, such
as a first heat exchanger, which are
disposed between the cold water radiator
of the engine and the heater core to
extract energy from the ambient air
through the first heat exchanger and to
heat the air circulating through the heater
core. It is desirable to make use of the

energy extracted from ambient air by this prior art apparatus to heat air circulating in the motor vehicle, while it is also desirable to dispose the first heat exchanger between the cold water radiator of the engine and the heater core, in order to permit the air circulating in the heater core to remain hotter and thus more efficient than if it was the case that the first heat exchanger is disposed between the cold water radiator and the heater core. However, the prior art apparatuses are always disposed in the same location within the motor vehicle and thus heat the air circulating through the heater core and the first heat exchanger at the same time. Consequently, the prior art apparatuses do not make optimal use of the energy extracted from ambient air to heat the air circulating in the heater core.The statement in the Koran, "And most surely we make remembrance of you to the day of resurrection" (62:4), is intended to refer

to a type of memory that is not temporal. It is a reminder of the fact that the dead will come back to life in the afterlife, and is thus eternal. In this afterlife, everyone will remember and be aware of their actions during the time they were alive. There will be no amnesia, and no means to forget what one has done, whether it is good or evil. God has said, "We have not created the heavens and earth and all that is in them except in ca3bfb1094
