Automatic System Cleaner is a lightweight Windows application that comes packed with several tools built specifically for helping you fix common computer issues. Although it bundles many dedicated parameters, the layout is straightforward and lets you carry out most repairing operations with just a few clicks. It is recommended to create a system restore point before proceeding with the system changes, as some important data may be deleted from the computer during a fixing operation. Automatic System Cleaner comprises several utilities, such as CCleaner, VIPRE Rescue Scanner, and Malwarebytes Anti-Malware, which help you delete temporary system files, scan your computer and remove malware, as well as detect and wipe out Trojans, rootkits, worms, spyware, and other type of threats. When it comes to boosting your system performance, you can fix slow shutdown problems, delete startup entries that are unnecessary, optimize the registry, disable the extra system notifications, and alphabetize the items in the Start and Favorites menu. There are several maintenance utilities, which allow you to schedule a system file defragmentation (Pagedefrag) at the next boot, and defragment the hard drive (Defraggler), as well as various fixing tools for helping you repair issues related to Windows, archived and plain text files, USB, printer, Task Manager, broken MS Office and Outlook links, and others. Additionally, the program gives you the possibility to reset the Windows Time function and network interfaces, disable the Desktop Cleanup Wizard feature, and

delete all files in the Recycle Bin. Last but not least, you can perform command-line operations, back up the registry data to a file, reboot the PC at the end of some tasks, as well as delete or update files. All in all, Automatic System Cleaner proves to be a reliable application that offers a decent pack of utilities and functions for helping you improve the overall performance of your computer.
