The project Java2SD is a tool used to generate sequence diagrams from Java code. A sequence diagram is a graphical representation of the flow of actions and data within a process. The following diagram represent this process: The class Team extends the Player which is extended from the Act class. Each Class represents a data abstraction from a data set object. The method Act() can be invoked directly by Java2SD which help the developer to invoke class method directly. With the help of Java2SD, developers can generate sequence diagrams of his code easily. Java2SD Description: JDepend - a project is used to calculate software metrics of the whole application. It can detect the application on several metrics such as: Number of classes, methods, lines, classes, methods per file, number of imports, number of files, number of components. The project JDepend provides two graphical user interface to visualize the results: Maven plugin integration for Maven, Sonar for Eclipse, Eclipse Plug-in. The project JavaRandom Number Generator provides a dynamic, fast and random NumberGenerator which works on any 32 or 64 bit JVM. The randomness of the number generator can be configured (lifetime, interval). The implementation has a small memory footprint (do not use Random - might cause memory leaks). Thanks to a native way of handling the primitive values, the generated numbers are optimized for the CPU. The project JavaRandom Number Generator provides the Java classes Rand, Random, RandomImpl, Rng, MockRand. Printing library for Java - It generates, in order, the print jobs for all the jobs available in the management of Unix (or Windows) servers. It is programmed in PHP, and it uses the ruby library class. JRuby class (create a new class) allows to run directly on the server as a script. Usage: The project Bonk is a utility library used by many projects and libraries to create & parse.xsd (XML Schema Definition) files. It allows to create simple (XML files) or complex (XSD files) structure using an example or a file. It implements multiple parsing methods (XPATH, SASS) allowing developers to use XSLT or XSD to process their files. The project XStream is a high-performance Java library used to serialize, or convert, Java Objects into XML documents. XStream can be

Java2SD application is designed to help developers visualize sequence algorithms in Java coding. This software provides APIs to invoke class methods directly. It will scan your code, extract sequences and each sequence is marked up with graphic coordinates and they are perfectly connected by line using line path feature. This application is designed for Java coding using API calls. How to use Java2SD? 1. You will need to install Java2SD in your system. You can download it from the Java2SD site. 2. Create an application to invoke class methods in Java. 3. Java2SD will scan your Java files and extract all sequence code. 4. Java2SD will generate graphics based on sequence code extracted from Java files. You will be able to know the sequence flow easily. 5. If you need to save the sequence diagram to XML file, you can set it in the Java2SD preference page. 6. Java2SD also provides an option to invoke class methods directly. You can save the output in XML file. 7. Java2SD supports Swing and Applet versions. Java2SD has an option to support both versions of Java. 8. Java2SD runs on all OS and versions of Java. Java2SD works on Windows and Unix environments. 9. Java2SD has a graphical user interface and it is easy to understand. Java2SD provides you with a lightweight application designed to help developers generate sequence diagrams of their code and thus understand the code algorithm easier. Java2SD will generate the sequence algorithm scheme at program execution. It can invoke class methods directly and save the output to XML format. A fast and easy way to generate Sequence Diagrams of your code Generate sequence diagrams in a few mouse clicks Output the sequence diagram to XML format Support all Windows versions Java2SD is a lightweight application, it can run under Windows 2000, Windows XP, Windows 2003 and Windows 2008 Server without the need to install any other programs. With Java2SD, you can generate sequence diagram with a few mouse clicks and export the diagram to XML format. Java2SD can support all Windows operating system. If you use Java2SD, you can save a lot of time for developing sequence diagrams. The source code of Java2SD is open source software, you can read and copy the source code of Java2SD here. J2SD-java2sd 0.0.4 Build 1412 - How to Use: 1. Download java2sd.zip file and decompress it. 2. In the JDK installation directory, create a folder named "j2sd". 3. Run "java2sd.bat" in the above directory. You will see the default screen as shown in figure 1. Figure 1: Default screen. 4. Now you can enter the command "Generate Sequence Diagram" in the corresponding menu item. You will see the series of the dialog box as shown in figure 2. Figure 2: Generate Sequence Diagram dialog box. 5. Now enter the class names of the source files you want to generate the diagram as shown in figure 2. After entering the class names, press "Generate" button as shown in figure 3. Figure 3: Enter classes names in Generate Sequences dialog box. 6. After that you can see the output as shown in figure 4. Figure 4: Output of sequence diagram. 7. To save the diagram to XML format, enter the option "Exporter Path" in the corresponding menu item. You can also save the diagram as image format as shown in figure 5. Figure 5: The menu option of Exporter Path. 8. You can also print the diagram with following options as shown in figure 6. Figure 6: Printer options for printing diagram. 9. Now you can start using Java2SD. Figure 7
