In each picture the player sees the title of each page, which is a part of the story (for

Elastic properties of wing tissue in the orb-web spider *Argiope keyserlingi*. Spider orb-webs are composite filaments

consisting of a continuous proteinaceous fiber embedded in a thin elastic membrane. The elasticity of the membrane leads to a variation of its stiffness with posture and, as a result, the entire web, including the thread, appears to be very elastic. Using tissue strains measured in the web wall during simulated prey capture, we found that *Argiope keyserlingi* orb-webs have greater stiffness

when the spider is resting in an upright position than when it is pre-caught and web-building in a horizontal position. Experiments investigating the mechanical properties of the wing tissue of both male and female *A. keyserlingi* revealed that the ducts that are used to deliver blood to the wings are weak and stretch easily, but the delicate membranes of the wing blade can bear high

stresses. The membranes of the male and female wings are similar in elasticity.Q: How do I access the fields of an RDD from a DStream before the transformation and combine them into a new RDD? The report cites anonymous sources and comes about a week after Nokia made the deal official. The phone-building business will become an independent subsidiary of Microsoft. It joins the Surface tablet business and the Xbox gaming platform, and it brings Microsoft a

physical business with a relatively high profit margin. It also brings a bunch of Lumia smartphone handsets that's seen sales plummet, like the Lumia 630, 520 and 928. The deal apparently gives Microsoft a combined 42.4 percent share of the phone market, though the company doesn't get a controlling interest. Nokia will keep its patents. The main thing this deal really does is tighten Microsoft's

grip on the mobile market. Just a few years ago, it was a three horse race between Microsoft, Apple and Google, but Apple and Google are scrambling to hold down a shared piece of the market, and that makes the mobile space as competitive as it's ever been. The Windows Phone OS has done well to hold its own share of the market, but right now it's fighting for top-tier hardware and a new overall

strategy. [Wall Street Journal]The Xbox One X is a beautiful piece of hardware. It has 6 teraflops of power, enough to render the latest games at the same quality as the latest graphics cards on PC. It has a custom chip to drive at 1.89 teraflops, and an improved version of the Xbox One's CPU-GPU hybrid architecture. It
