\* For web design

---

and graphics, Adobe Photoshop is the preferable tool because of its robust features, because it can be applied to the online arena as well as printed media. Photoshop

---

uses a workspace that enables users to layer images and tools on top of one another. Once a photo is complete and in its final form, it can be sent directly to the Web.

---

Many individuals and companies have a family member or friend who has Adobe Photoshop or similar image-editing software on their computer.  
Photographers who

---

work for professional organizations or businesses also have these editing programs on their computer workstations. In this case, the editing software is used

---

professionally and  
the user often edits  
many different  
images  
simultaneously. The  
Editor's Basics The  
steps to create a  
photograph are  
divided into creation

---

and then  
manipulation. Once  
an image is created,  
it can be processed  
and placed on the  
Web. \* Creation: The  
steps in creating a  
photo are beginning,  
shutter speed,

---

aperture, ISO, and white balance, and in its creation stage, an image is just a photograph. \*

Manipulation: Once an image is created, it can be manipulated using a

---

number of different techniques and tools. You can distort, crop, color, and layer images, plus you can produce special effects. The following steps

---

explain the process  
to a beginner using  
Photoshop. Step 1:  
Open the image  
Image © Don  
McCulloch The first  
step in creating a  
photograph is to  
open the image that

---

you want to capture.  
Step 2: Enhance the  
background This  
image contains a  
white background  
with simple pattern.  
At this point, a new  
layer is created and  
the background is

---

treated like a layer. You can see that a background has been selected. You can make this layer a permanent layer by clicking Layer from the Layers panel. The

---

background layer is retained as a backup and is not affected by any of the later steps in the process.

\* If the background is solid, it's OK to leave the background as-is

---

and proceed to Step  
3. \* If the  
background is  
complicated, you  
can keep the  
background  
information and hide  
it. For example, in  
this photo, when the

---

camera's flash was used to illuminate the subject, a large white light illuminated the background, which presented a difficult image to capture. Since the

---

background was illuminated by the flash, it should be retained. To do this, select the layer, open the Layer menu,

Humans could have been as ancient as 20 million years old in Africa, according to new discoveries, and these ancient ancestors may have

---

developed  
agriculture more  
than 10,000 years  
before the so-called  
"farming revolution"  
5,000 years ago in  
the Fertile Crescent.  
Researchers from  
Imperial College

---

London and  
University College  
London used genetic  
analyses of modern  
hunter-gatherers  
and ancient skeletal  
remains from the  
same area of the  
Ethiopian Highlands

---

to trace the roots of agriculture. This was possible, they said, because fossil remains of the geological age the Ethiopian Highlands are situated within were found at the

---

bottom of a rich alluvial layer, which covered the bottom of the Red Sea some 30 million years ago. The team, led by Dr Badele Ogus of the Department of Archaeology at the

---

University College of London, analyzed the genes of modern-day "non-agricultural" hunter-gatherer people in Ethiopia and the surrounding region to compare with

---

early agriculture-era remains found in the same area. Using the same genes as our parents Dr Ogus said: "We wanted to know if the start of agriculture lay in Ethiopia. The answer

---

was definitely a yes  
- the earliest fossil  
remains of  
agricultural practice  
in the Neolithic  
region of the world,  
is found in Ethiopia.  
They are truly an  
anomaly - dated to

---

the same geological epoch as the fossils of Ethiopia."

Researchers said they now know that humans have been practicing agriculture for around 10,000

---

years, which is likely to be thousands of years earlier than previously thought. Dr Ogus said: "We found that within Ethiopia, there are four main sets of hunter-gatherers -

---

specifically, groups of people living in the same region, but who have different ways of life and different food sources. "They may have had different fates in the past, but

---

they are  
contemporary and  
have similar life-  
style, social  
structure and  
marriage systems.  
"These groups  
traditionally lived  
from hunting and

---

gathering. In addition, the predominant food source in the region was wild fruit and vegetables, which might have been supplemented by small-scale foraging

---

and the occasional gathering of wild meat. "Our research has shown that, as a result, the closest living relatives of these ancient Ethiopian groups are hunter-gatherers

---

living in East Africa today. Most of the modern people living in the area today can trace their genetic roots back to some of the ancient hunter-gatherers." He added: "

## What's New In?

In many situations, an electronic device may be locked with a security password. Often, a password may be a simple alphanumeric string.

---

A password may be changed by the user, but in most cases, the security password for the electronic device should remain constant from the initial set up to the

---

point of use. The password may be long and difficult to guess. In the past, the security passwords may have been memorized by the user. Often, the user may have told

---

an employee of the  
electronic device  
company the  
password.

Alternatively, the  
user may have  
written the security  
password down. To  
be secure, the

---

security passwords  
may be difficult to  
guess or may take  
some time to guess.  
For example, the  
security passwords  
may be a series of  
letters or numbers  
which are difficult to

---

recite in the order that they are required to be spoken. The order in which these letters are spoken would be very difficult for someone to guess. Alternatively, a

---

password may be difficult to guess because of the number of required guesses or because a pattern may be required for each guess. In many situations, a single

---

try may not be sufficient to guess the security password. For example, a security password that may be determined in a single attempt may be more secure than

---

a security password that may have a 5-8 try maximum. In some situations, an employee may employ certain automated techniques to guess the security

---

password. For example, the automated techniques may guess the security password in case the user forgets the security password. This may be

---

preferred as having  
the user remember  
the security  
password may be a  
security risk.  
Further, in some  
instances, the  
automatic  
techniques may

---

guess the security password in lieu of asking the user the security password. In some instances, a guessing technique may require the automatic techniques to read a

---

series of inputs  
made by the user. In  
some instances, a  
series of inputs  
made by the user  
may be a text string  
such as a sentence  
in reverse order.  
Thus, the inputs may

---

be a string of characters that is a series of the characters in the security password. For example, the string of characters may be a sentence in reverse order. In

---

some situations, the guessing technique may include attempting to use the characters of the security password in some order that is known to be the order in which the

---

characters are required to be spoken. This may be referred to as a character placement technique. In another example, the guessing technique may

---

attempt to use a series of characters in the manner in which the characters are arranged on a page or screen
