I'm trying to understand what it does.Q: Collapsing a document XML using XSLT or XQuery I am trying to transform/collapse a document.xml file into a new one, a smaller one. I have tried to use XSLT and XQuery but I just can't manage to successfully reproduce the process. I found some stuff on the internet, but it does not work. Can anyone help me? The new xml has 40 lines instead of the original one that had 78 lines. Original file: dunn-test dunn-test dunn-test dunn-test dunn-test.
