For the first time, you can choose ZIP compression by default. The compression format is automatic (for any file format supported by WinRAR). Choose ZIP, compress the folder, or select a file to uncompress in WinRAR, and this data will be compressed in an archive. WinRAR can create and open archives of many different formats, including RAR, ZIP, ISO, TAR, ARJ, ACE, CAB, and other formats. WinRAR and WinZip are very similar to each other, but the latter is much more widely used. The ability to compress and uncompress files helps make them indispensable. From a tool to expand files for backup to a standalone archive utility, there are several things that you can do with WinZip, but when it comes to extracting, WinRAR is much more flexible. In fact, the compression and decompression options of the two are exactly the same. The only difference is that WinRAR has added some additional features and the interface is somewhat simpler. The ZIP archive format is sometimes referred to as the zip file format, ZIP format, ZIP stream, or even RAR archive. It is also often called ZIP-file format, ZIP-stream format, RAR archive format, or ZIP-RAR format. WinRAR creates ZIP archives by default. However, if you prefer to use a different compression algorithm, you can create this format using a different command-line switch. For example, you can set up WinRAR to use the LZH compression algorithm and use an archive called LZH archive format. WinRAR is used to create ZIP archives in all of the formats supported by WinRAR. WinRAR is able to store files of any type and size, regardless of what the file extension is. You can specify many different compression algorithms to create a ZIP archive, allowing you to determine the compression level of the archive, as well as the compression speed.
