These series of sketches were done at the Wechsler Institute of Human Development, Yale University for my doctoral study.2. Field of the Invention The present invention relates to a linear guide apparatus, and more particularly to a linear guide apparatus utilizing rollers that can withstand an axial load. 2. Description of the Prior Art Typical linear guide apparatuses comprise a base and a rail slidably engaged between the base and the rail for allowing the base to be moved relative to the rail. The typical linear guide apparatuses comprise a rail having a through bore defined therein, a base movably engaged with the rail, and a retainer engaged in the rail and the base for preventing the base from moving relative to the rail, and for permitting the base to be moved relative to the rail along the rail and base for allowing the base to be moved relative to the rail. The typical linear guide apparatuses are normally comprised of a box-shaped base slidably engaged with the rail, a box-shaped rail slidably engaged with the base, and a retainer engaged in the rail and the base for preventing the base from moving relative to the rail, and for permitting the base to be moved relative to the rail along the rail and base for allowing the base to be moved relative to the rail. However, a number of components of the typical linear guide apparatuses are needed to be assembled to each other, and thus to cause an increase in the manufacturing cost of the typical linear guide apparatuses. The present invention has arisen to mitigate and/or obviate the afore-described disadvantages of the conventional linear guide apparatuses. The new site is much more professional, with a much cleaner look and feel
